Summary

Senior Software Engineer with **8 years of experience** architecting scalable **SaaS products** and **data platforms**, specializing in **Apache Spark**, **AWS**, and large-scale **ETL/streaming pipelines**. Proven track record of leading complex initiatives from infrastructure migration to real-time analytics. Increasingly focused on applying **AI** — from **GenAI**-powered features to **agentic systems** — to solve real business problems.

Technical Skills

Languages & Frameworks: Python, Scala, Ruby, JavaScript, SQL, REST APIs, CI/CD, Apache Druid, Terraform

Data Engineering: Apache Spark, Apache Kafka, Spark Streaming, AWS Glue, ETL Pipelines, Distributed Systems

Cloud & Infrastructure: AWS (EMR, EC2, S3, Lambda), Apache Airflow, Redis, MySQL, NoSQL (HBase, Scylla)

Professional Experience

Senior Software Engineer | Blueshift – Pune, India May 2021 – Present

- Led strategic migration of data science infrastructure from **on-premise Ambari to AWS EMR** with optimized EMR and Spark configurations, delivering **33% cost reduction** and **\$150K annual savings**
- Built a **Text-to-SQL agentic system** enabling natural language querying of structured data, and contributing to the company's **Agentic Launchpad platform** - developing **MCP servers** and **autonomous agents** capabilities
- Architected and deployed **real-time data streaming pipelines** processing **100+ million** customer engagement events daily with **99.9% uptime**, enabling personalized recommendations at scale
- Developed comprehensive **analytics platform** providing near real-time insights on **customer orders, revenue trends, website engagement, and user interactions**, enabling data-driven business decisions
- Built and maintained **ETL and aggregation processes** on AWS infrastructure, managing end-to-end data flow from ingestion to activation for generating recommendations.
- Spearheaded migration of legacy MapReduce batch jobs to **Apache Spark framework**, achieving **70% faster** data processing and reducing daily ETL processing time **from 8 hours to 2.4 hours**
- Optimized data transmission pipelines using **Kafka and Apache Pulsar** to ensure zero data loss during system outages and maintain data consistency

Software Engineer | Josh Software – Pune, India June 2018 – May 2021

- Developed end-to-end features for sales management web application, reducing manual Excel maintenance by **80%** and cutting daily reporting time **from 3 hours to 30 minutes** through automated inventory dashboards
- Implemented performance optimizations including **asynchronous job processing**, database denormalization, query tuning, and **Redis caching**, significantly improving page load times and user experience
- Designed and implemented **RESTful APIs** supporting core ad-sales functionality and seamless third-party integrations with external systems

Education

BTech in Information Technology | Walchand College of Engineering Aug 2014 – June 2018

- CGPA: 8.3/10.0

Awards & Recognition

Morpheus Award (Raise the Bar) | Blueshift 2024

- Received company-wide recognition for successfully delivering two major initiatives: AWS EMR migration and analytics platform development, directly contributing to **\$150K annual cost savings** and improved data processing capabilities
